Rationale of the Study

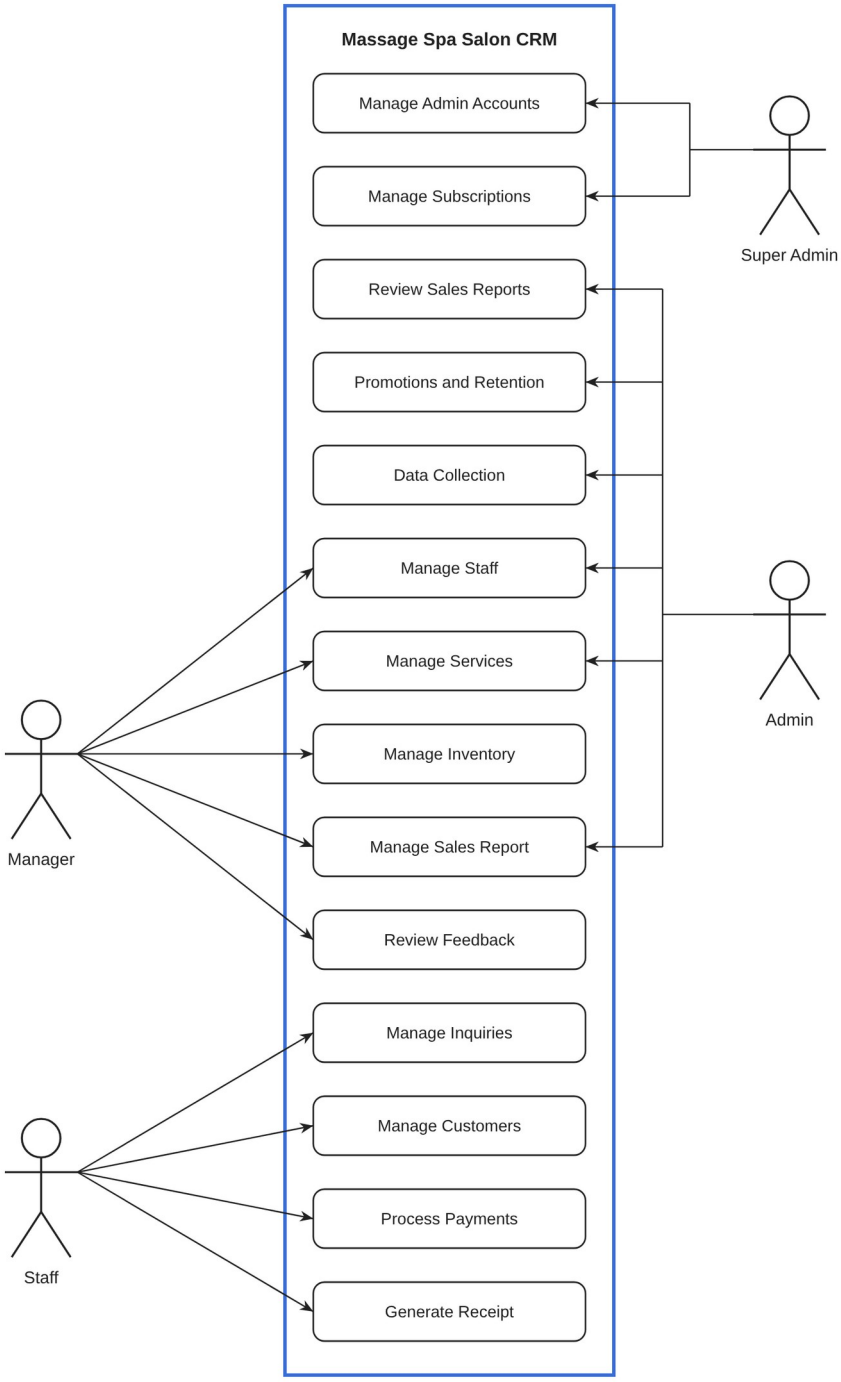

Massage Spa Salon Customer Relationship Management (CRM) System

Massage spa salons often face challenges in handling customer inquiries, keeping track of customer records and service history, processing payments, supervising staff, tracking supplies, and monitoring sales. Because many salons still rely on paper logbooks, chat messages, and spreadsheets, these problems can lead to lost customer information, slow and inaccurate billing, unorganized staff assignments, outdated service lists and prices, untracked supplies such as massage oils and towels, delayed sales reports, and regular customers who stop returning without the business noticing.

To address these challenges, the proposed Massage Spa Salon Customer Relationship Management (CRM) System, developed in C#, aims to integrate essential customer and business operations into one centralized platform. The system will have four user roles: Super Admin, Admin, Manager, and Staff. The Super Admin will manage admin accounts and salon subscriptions, the Admin will review sales reports, handle promotions and customer retention, oversee data collection, and manage staff, services, and sales reports, the Manager will manage staff, services, inventory, and sales reports and review customer feedback, while Staff will manage customer inquiries and customer records, process payments, and generate receipts. Customers will be served and recorded by the staff without needing to create accounts.

Through this integrated system, the salon can maintain complete customer records, speed up front-desk transactions, produce accurate sales reports, act on customer feedback, keep track of inventory, and run promotions that encourage customers to return. Ultimately, the proposed system aims to enhance operational efficiency, support better decision-making, strengthen customer loyalty, and provide clients with a more personalized and reliable salon experience.

USE CASE

Massage Spa Salon CRM
Manage Admin Accounts
Manage Subscriptions
Review Sales Reports
Promotions and Retention
Data Collection
Manage Staff
Manage Services
Manage Inventory
Manage Sales Report
Review Feedback
Manage Inquiries
Manage Customers
Process Payments
Generate Receipt
Super Admin
Admin
Manager
Staff
